Problem-Solution Fit

Date	01 October 2026
Team ID	SWTID-2026-2949
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS]

- End users (employees) who raise IT tickets
- Service desk agents who triage tickets
- Team leads / dispatchers who manage queues and SLAs

6. CUSTOMER LIMITATIONS [CL]

EG. BUDGET, DEVICES

- Limited number of agents and time per ticket
- Users do not know IT categories
- Must work within the existing ServiceNow instance and licences
- Access from laptop, desktop or mobile

5. AVAILABLE SOLUTIONS [AS]

PROS & CONS

- Manual triage: flexible, but slow and inconsistent
- Predictive Intelligence (ML): adaptive, but needs large clean ticket history and extra licence
- Scattered business rules: simple, but hard to maintain and track

2. PROBLEMS / PAINS [PR]

+ ITS FREQUENCY

- Tickets get the wrong category or group
- Delayed assignment and reassignment loops
- Happens daily, many times per shift

9. PROBLEM ROOT / CAUSE [RC]

- Triage is manual
- No standard keyword-to-group rules
- Vague descriptions and user-picked categories
- Routing knowledge sits with individuals

7. BEHAVIOR [BE]

+ ITS INTENSITY

- Agents read each ticket and reassign wrong ones
- Users chase updates by email or chat
- High intensity at peak hours and during major incidents

3. TRIGGERS TO ACT [TR]

- A new ticket is created
- An SLA is about to be breached
- Ticket volume spikes
- Management asks to reduce misrouting

10. YOUR SOLUTION [SL]

- A Flow Designer flow triggers when an incident is created or updated.
- It reads keywords in the short description and uses a decision table to set category, subcategory, priority and assignment group.
- Unmatched tickets go to a default triage queue.
- The assignee and caller are notified automatically.
- Reports track auto-classification and misroute rates.

8. CHANNELS OF BEHAVIOR [CH]

ONLINE

- ServiceNow Service Portal
- Email and chat / Virtual Agent

4. EMOTIONS [EM]

BEFORE / AFTER

- Before: frustrated, anxious, overwhelmed
- After: relieved, confident, satisfied

OFFLINE

- Phone call to the service desk
- Walk-up IT desk
