Code-Layout, Readability and Reusability

Date	01 October 2026
Team ID	SWTID-2026-2949
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the quality of the codebase in terms of its structure, readability, and reusability. Well-organized code with proper naming conventions, comments, and modular design ensures that the project is maintainable and can be extended or reused in future development.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing/tabs used throughout the code	Yes	Script steps use 4-space indentation; flow steps follow one standard order (trigger, lookup, condition, update).
2	Proper File Structure	Files and folders are logically organized	Yes	Flow, subflows, decision table and notifications are grouped in one application / update set with clear names.
3	Meaningful Variable Names	Variables reflect their purpose clearly	Yes	Flow variables and data pills are named by purpose, e.g. ticket_category, assignment_group.
4	Function / Method Names	Functions are descriptively named	Yes	Flows and actions are named by what they do, e.g. Auto Classify Incident, Assign Group by Category.
5	Code Comments	Inline and block comments explain logic	Partial	Flow steps and script blocks have descriptions; comments on the decision table rules can be improved.
6	Modular Design	Code is split into reusable functions/modules	Yes	Classification, assignment and notification are separate subflows / actions.
7	No Redundant Code	Duplicate or unused code is removed	Yes	Keyword rules are stored once in the decision table; test flows are deleted or deactivated.
8	Error Handling	Exceptions and errors are handled gracefully	Yes	Unmatched tickets go to a default triage queue and failed runs are visible in flow execution history.

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level (High / Medium / Low)
1	Classify Incident subflow	Flow Designer (Subflow)	Incident, Service Request and Problem flows	High
2	Keyword Rules Decision Table	ServiceNow Decision Table	Classification and routing for any category or team	High
3	Assign Group action	Flow Designer (Custom action)	Incident and Service Request assignment	Medium
4	Assignment email template	ServiceNow Email Notification	Assignment, resolution and SLA alerts	Medium
5	Default triage queue handler	Flow Designer (Subflow)	Any flow needing a fallback queue	Medium

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	4	Clear structure with separate subflows and a rules table.
Readability	4	Descriptive names and step descriptions make the flow easy to follow.
Reusability	4	Subflows and the decision table can be reused for other ticket types.
Documentation / Comments	3	Add more notes on rule logic and an admin guide for updating keywords.
Overall Score	4	Well-organised and maintainable; improve documentation next.
