Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	**Stage 1: Ticket Creation**	**Stage 2: Auto Classification and Routing**	**Stage 3: Resolution and Closure**
Actions *What does the customer do?*	• Notices an IT problem such as VPN or password failure • Logs in to the ServiceNow portal • Types a short description and submits the ticket	• Waits for the ticket to be picked up • Receives a notification with the ticket number • May check the ticket status in the portal	• Answers follow-up questions from the resolver • Tests the fix and confirms it works • Closes the ticket or gives feedback
Touchpoint *What part of the service do they interact with?*	• ServiceNow Service Portal / incident form • Short description and description fields • Email or chat for urgent issues	• Flow Designer flow triggered on incident creation • Email / portal notification • My Tickets list showing category and group	• Assigned support group's work notes and comments • Email updates on resolution • Satisfaction survey
Customer Thought *What is the customer thinking?*	• "Which category should I choose?" • "I hope someone sees this quickly." • "I just want my work to continue."	• "Has my ticket reached the right team?" • "Why is there no update yet?" • "I am glad it has an owner already."	• "Is the issue really fixed?" • "I hope I don't have to raise this again." • "That was faster than before."
Customer Feeling *What is the customer feeling?*	Frustrated and blocked from work, but hopeful that help is coming.	Anxious while waiting; relieved when the ticket is assigned automatically.	Satisfied and confident when resolved quickly by the right team.
Process Ownership *Who is in the lead on this?*	End user (raises ticket); Service Desk (supports)	Flow Designer automation; ServiceNow admin / flow owner	Assignment group resolver; Service Desk lead (SLA monitoring)

Phase of Journey	**Stage 1: Ticket Creation**	**Stage 2: Auto Classification and Routing**	**Stage 3: Resolution and Closure**
Opportunities *How can we improve this stage?*	• Simplify the form and add example descriptions • Use a Virtual Agent to collect clear details • Show suggested KB articles while typing	• Keep keyword rules in a decision table and refine them regularly • Use a default triage queue for unmatched tickets • Later: add Predictive Intelligence for better accuracy	• Show a dashboard of misrouted and breached tickets • Auto-suggest KB articles to resolvers • Collect feedback to improve the rules
