Technology Stack

Date	01 October 2026
Team ID	SWTID-2026-2949
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	**Frontend / Client-Side**	ServiceNow Service Portal and Next Experience (Incident form)	Users raise and track tickets through the standard ServiceNow interface, so no custom front end is needed. It is responsive and works on desktop and mobile.
2	**Backend / Server-Side**	ServiceNow Flow Designer (low-code flows, triggers and actions)	Flow Designer triggers on incident creation, checks keywords and uses Update Record to set category, priority and assignment group. It needs little code and is easy to maintain.
3	**Database / Data Storage**	ServiceNow platform database (Incident table, Decision Table for rules, Assignment Group table)	Tickets and classification rules are stored inside the platform, so no separate database is required. Rules can be edited by admins without changing the flow.
4	**Cloud / Hosting / Deployment**	ServiceNow cloud instance (Personal Developer Instance)	A hosted, managed environment with built-in scalability and availability. The free developer instance is suitable for building and testing the project.

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
5	**Version Control & CI/CD**	ServiceNow Update Sets (optional GitHub integration)	Update Sets move the flow and rules between instances and keep a record of changes. Source control integration with GitHub can be added for team collaboration.
6	**Third-Party APIs / Other Tools**	ServiceNow Email Notifications, Reports and Dashboards (optional IntegrationHub)	Email alerts inform the assignment group and caller. Reports and dashboards track classification accuracy and SLAs. IntegrationHub can later connect Teams or Slack.
